

Diaphragm Valve, Plastic

Construction

The GEMÜ 610 pneumatically operated 2/2-way diaphragm valve has a low maintenance plastic piston actuator which can be controlled by inert gaseous media. Normally Closed, Normally Open and Double Acting control functions are available.

Features

- Suitable for inert and corrosive* liquid and gaseous media
- The valve is insensitive to contaminated, abrasive media
- Integrated optical position indicator
- Compact design
- Valve body and diaphragm available in various materials and designs
- Optional flow direction and mounting position

Advantages

- All medium wetted parts and housing made of plastic
- Optional accessories
 - Stroke limiter
 - Electrical position indicator
 - Electrical position indicator with microswitches or proximity switches
- Special solutions and block versions on request

*see information on working medium on page 2

Sectional drawing

Technical data

Working medium

Corrosive, inert, gaseous and liquid media which have no negative impact on the physical and chemical properties of the body and diaphragm material.

Ambient temperature

Valve body PVC-U	10 to 50 °C
Valve body PP / PP-H	5 to 50 °C
Valve body PVDF	-10 to 50 °C

Working medium temperature

Valve body PVC-U	10 to 60 °C
Valve body PP / PP-H	5 to 80 °C
Valve body PVDF	-20 to 80 °C

The permissible operating pressure depends on the working medium temperature.

Control medium

Inert gases	
Max. perm. temperature of control medium	40 °C
Filling volume	0.02 dm ³

Pressure / temperature correlation for plastic

Temperature in °C (plastic body)		-20	-10	±0	5	10	20	25	30	40	50	60	70	80
Valve body material		Permissible operating pressure [bar]												
PVC-U	Code 1	-	-	-	-	6.0	6.0	6.0	4.8	3.6	2.1	0.9	-	-
PP / PP-H	Code 5 / N5	-	-	-	6.0	6.0	6.0	6.0	5.1	4.2	3.3	2.4	1.6	0.9
PVDF	Code 20	6.0	6.0	6.0	6.0	6.0	6.0	6.0	5.4	4.8	4.3	3.8	3.2	2.8

Data for extended temperature ranges on request. Please note that the ambient temperature and medium temperature generate a combined temperature at the valve body which must not exceed the above values.

		Operating pressure	Control pressure [bar]			Kv value
Diaphragm size	DN	[bar]	Stf. 1	Stf. 2	Stf. 3	[m ³ /h]
10	12	0 - 6	5 - 7	max. 5.5 see diagram	max. 5.0	2.8
	15					3.5
	20					3.5

All pressures are gauge pressures. Operating pressure values were determined with static operating pressure applied on one side of a closed valve. Sealing at the valve seat and atmospheric sealing is ensured for the given values. Information on operating pressures applied on both sides and for high purity media on request. Control pressure values depend on the valve stroke.

Kv values determined acc. to DIN EN 60534, inlet pressure 5 bar, Δp 1 bar, PVC-U valve body and soft elastomer diaphragm. The Kv values for other product configurations (e.g. other diaphragm or body materials) may differ. In general, all diaphragms are subject to the influences of pressure, temperature, the process and their tightening torques. Therefore the Kv values may exceed the tolerance limits of the standard.

Technical data

O-ring material for valve bodies with union ends

Diaphragm material	O-ring material
NBR	EPDM
FPM	FPM
EPDM	EPDM
PTFE	FPM
Other combinations on request	

Control pressure / operating pressure diagram

With pneumatically operated diaphragm valves there is an interdependence between control pressure and operating pressure regarding the valve stroke.

With valves closed by spring pressure this means: The lower the operating pressure, the higher the control pressure must be to open the valve completely. With valves opened by spring pressure the opposite applies.

In principle care has to be taken that the stated maximum pressures are not exceeded and that the minimum pressures are adhered to.

Required control pressures can be seen from the diagram.
